

## Lighting Up Communities

Advancements in alternative energy technology are enabling us to support Sarawak's ambition to achieve full electrification for the state by accelerating the provision of 24-hour electricity coverage to villages too distant to connect to the main electricity grid.

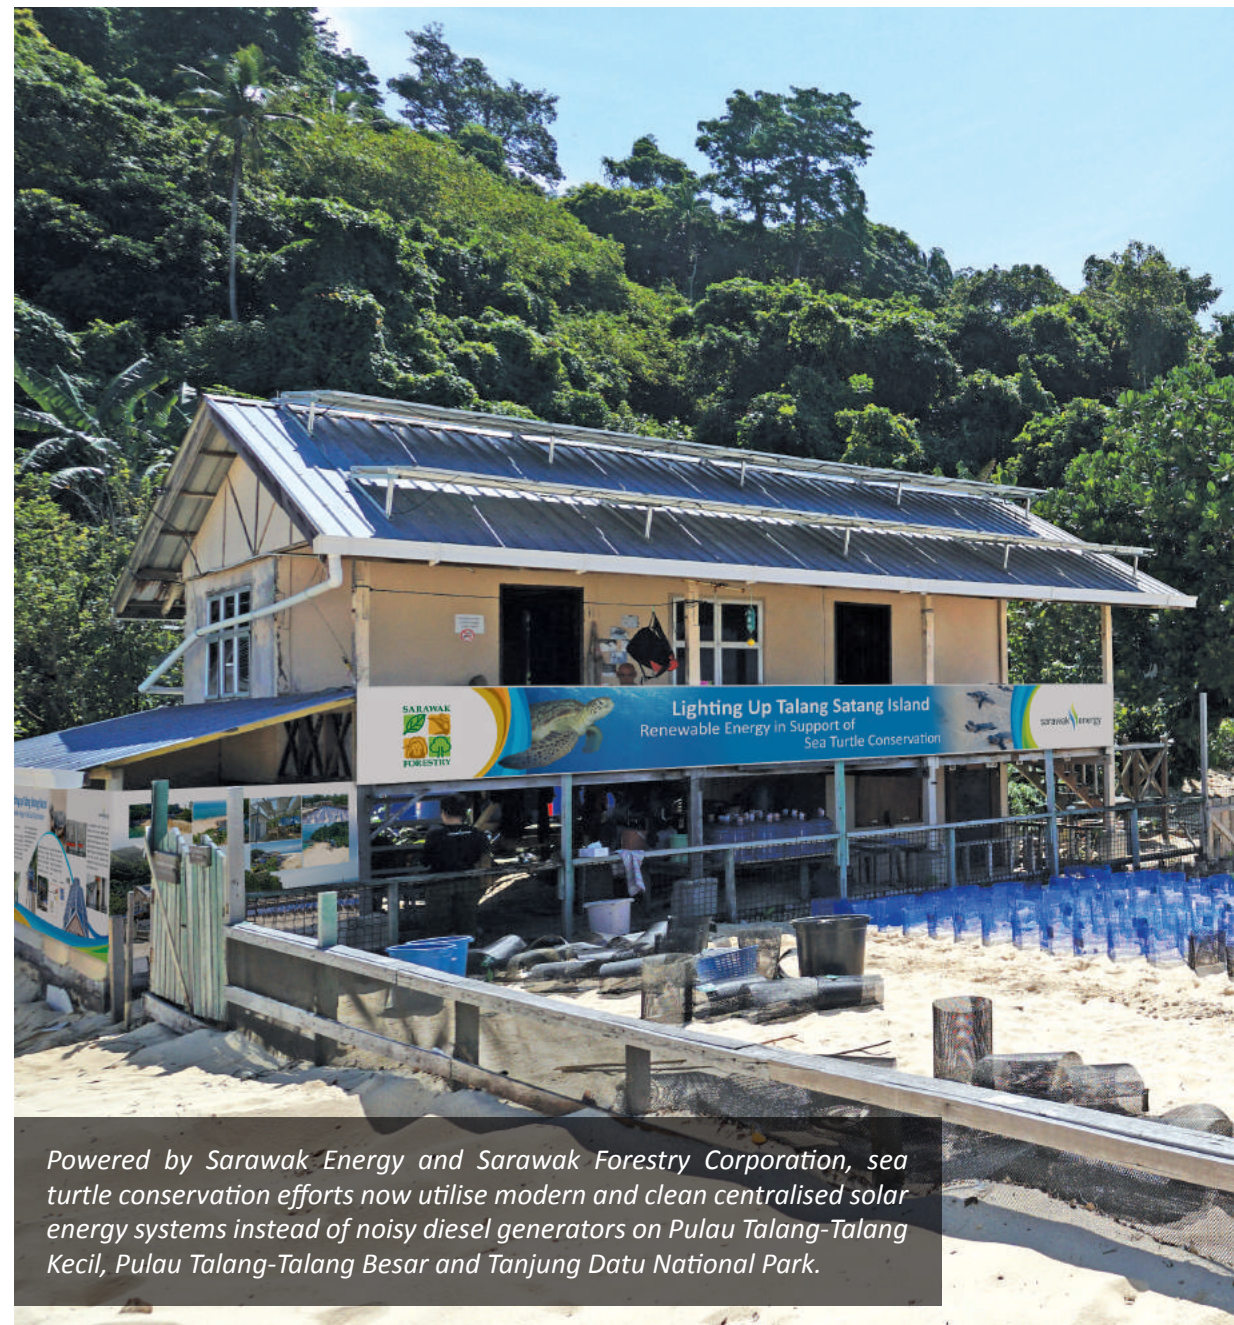

### About Sarawak Energy

- Sarawak Energy is powered by a multi-disciplinary workforce of 5,000 Sarawakians, serving a population of about 3 million, covering domestic, commercial, industrial and export customers through an extensive transmission and distribution network.
- Our mission is to deliver reliable, sustainable and affordable energy for the people of Sarawak and beyond.

Community-based Sarawak Alternative Rural Electrification Scheme or SARES involves the construction of stand alone alternative system utilising solar technologies.

Powered by Sarawak Energy and Sarawak Forestry Corporation, sea turtle conservation efforts now utilise modern and clean centralised solar energy systems instead of noisy diesel generators on Pulau Talang-Talang Kecil, Pulau Talang-Talang Besar and Tanjung Datu National Park.

Solar Home Systems light up communities in Batang Ai as part of Sarawak Energy's Corporate Social Responsibility Programme.
